

MENTOR® MemoryGel® and Saline Filled Breast Implant PRODUCT FEATURES

Options for Every Body Type

WHICH TYPE OF MENTOR® BREAST IMPLANT IS RIGHT FOR YOU?

MENTOR offers a number of specialized products that are tailored to the personal and unique needs of women. Our rich history is filled with industry firsts, innovative product designs and groundbreaking research. While other manufacturers have come and gone, MENTOR has a record of continually producing leading-edge, FDA-approved breast augmentation products. And, we are the only company to manufacture our breast implants right here in the USA.

MENTOR® MEMORYGEL® BREAST IMPLANT

- FDA approved
- Made in the USA
- Filled with a MENTOR proprietary cohesive gel that holds together uniformly while retaining the natural give that resembles breast tissue
- Set fill volume
- Four projection options: Classic, Moderate Plus, High and Ultra High Profiles
- Two shell surfaces available: smooth and textured (MENTOR® SILTEX® Texture)
- Covered by the MENTOR Premier Advantage Limited Warranty and Lifetime Replacement Policy

There are two types of breast implants: saline breast implants and silicone breast implants. In addition to the choice of MENTOR® MemoryGel® Breast Implants or MENTOR® Saline Filled Breast Implants, MENTOR provides a wide variety of size, profile and surface texture choices, offering surgeons more options to achieve the best fit for their patients' body types.

Here is a closer look at some of the features of both MENTOR® MemoryGel® Breast Implants or MENTOR® Saline Filled Breast Implants. This side-by-side comparison can help you determine which implant type is right for you. Your plastic surgeon is another excellent resource with whom to discuss your options.

MENTOR® SALINE FILLED BREAST IMPLANT

- FDA approved
- Made in the USA
- Filled with a saltwater solution similar to the fluid that makes up most of the human body; slightly firmer feel
- Flexible fill volume, allowing the surgeon to adjust the volume during the procedure
- Four projection options: Moderate, Moderate Plus, High and Ultra High Profiles
- Two shell surfaces available: smooth and textured (MENTOR® SILTEX® Texture)
- Covered by the MENTOR Standard & Enhanced Advantage Limited Warranties and Lifetime Replacement Policy

Important Safety Information:

MENTOR® MemoryGel® and Saline Filled Breast Implants are indicated for breast augmentation - in women who are at least 22 years old for MemoryGel® Implants and at least 18 years old for Saline Implants - or for breast reconstruction.

Breast implant surgery should not be performed in women:

- With active infection anywhere in their body
- With existing cancer or pre-cancer of their breast who have not received adequate treatment for those conditions
- Who are currently pregnant or nursing.

Safety and effectiveness have not been established in patients with autoimmune diseases (for example lupus and scleroderma), a weakened immune system, conditions that interfere with wound healing and blood clotting, or reduced blood supply to breast tissue. Patients with a diagnosis of depression, or other mental health disorders, should wait until resolution or stabilization of these conditions prior to undergoing breast implantation surgery.

There are risks associated with breast implant surgery. You should be aware that breast implants are not lifetime devices and breast implantation is likely not a one-time surgery. You may need additional unplanned surgeries on your breasts because of complications or unacceptable cosmetic outcomes. Many of the changes to your breast following implantation are irreversible (cannot be undone) and breast implants may affect your ability to breastfeed, either by reducing or eliminating milk production.

The most common complications with MemoryGel® Breast Implants include reoperation, capsular contracture, asymmetry, and breast pain. A lower risk of complication is implant rupture, which is most often silent (meaning neither you nor your doctor will know you have a rupture). MRI screenings are recommended three years after initial implant surgery and then every two years after to detect silent rupture.

The most common complications with MENTOR® Saline Filled Breast Implants include reoperation, implant removal, capsular contracture, wrinkling, breast pain and deflation.

Detailed information regarding the risks and benefits associated with MENTOR® Breast Implants is provided in two brochures, *Important Information for Augmentation Patients about MENTOR® MemoryGel® Silicone Gel-Filled Breast Implants* or *Saline-Filled Breast Implants, Making an Informed Decision* available from your surgeon or on line at www.mentorwwllc.com. It is important that you read and understand these brochures when considering MENTOR® Breast Implants.
